Energy Management and Optimization Policy

Rice Business Crop Integrated Business Transportation and services (business) attach importance to the promotion and support of energy efficiency. including the conservation of energy for both office buildings and factories of the business

To be a guideline for energy management and optimization for maximum benefit The business has established energy and efficiency management policies as follows:

1. Compliance with relevant laws and agreements: Implemented and developed by requiring conservation and management of energy and efficiency as part of the business operations. corresponding to Legal and Customer Requirements including international agreements
2. Risk and Impact Reduction: Integrate energy conservation into systematic business decision making. This will be important for increasing energy efficiency, reducing negative environmental impacts and reducing the use of natural resources.
3. Culture: fostering leadership behavior and instilling a culture of energy conservation for personnel at all levels in the business and business partners
4. Participation: Focus on building energy conservation strategies and actions to support participation and suggestion of useful opinions on the development of energy management and efficiency of the business group through collaboration between employees, customers, partners, communities and other stakeholders
5. Continuing development : Regularly monitor and review the energy conservation performance. and the development of optimization projects Develop new energy conservation innovations to enhance energy management. as well as communicate and disseminate information on energy management and efficiency improvements to Stakeholders and the public through an annual sustainability report

For this energy policy to be implemented in a concrete manner Therefore, every company has to apply it to suit the business operation.
