Food and Services Traceability Policy

“Food and Services Traceability Policy” has been set up for the purposes of establishing a precise and timely digital traceability system across CP Crops, rice, transportation and service business Group value chain in all business units in Thailand and in every country of CPTG and CP Crop’s operations all over the world, enabling the transparent information traceability in every step of the animal feed production, farm operation, food processing, logistics, warehouses and distribution centers, where relevant raw materials, food additives, ingredients and packaging are all included

1. Business Process of Agricultural Farm Factories, transportation and customer service must be able to trace every step in the supply chain, covering everything from going back to the source of raw materials (Backward Traceability) to verifying products going to customers (Forward Traceability).

2. Raw materials in business processes Be it plants, animals, ingredients or even packaging. Must be able to trace back to the factory, farmer's plot, and be able to identify the source of raw materials. By Raw materials in for all kinds and types of product and services must be traceable back to the farm, factory, including the identification of source of all raw materials used in producing the products with evidence of legal locations of crop plantations.

3. Communication with customers and consumers in order to make them aware of and appreciate good nutrition of CP Crops, rice, transportation and service business Group’s food products, production process throughout the supply chain with global quality and safety standards, environmentally friendly process and sustainable management.
